Profile

Ahoy!
I'm graduated in Computer Science, and programming are in my veins since a little boy. I'm a front-end engineer, who's been working on the last couple of years with react, started with the early versions, now being more proficient using it with nextjs framework. During this journey, I tried to be updated with the new design patterns, and work with other technologies such as redux, graphql, express, nestjs, typeorm, etc. I already worked with sectors such as the supply chain. I consider myself as a person who's capable of mentoring in an easy way.
I am well-versed in software development methodologies such as Agile and Scrum. With a strong background in engineering and a deep understanding of software development principles, I have successfully delivered high-quality projects throughout my career. My technical proficiency, combined with my ability to collaborate effectively and adapt to new technologies, makes me a valuable asset to any software development team.

Employment History

Senior Software Engineer
Farfetch, Braga | March 2022

- Mentoring peers
- Plan, lead and architecture project implementations such as Design System Implementation, microfrontends and modular B2B applications.
- Explore and define strategy to adopt and integrate new technologies at the frontend stack.
